

A Special Issue in Honor of Chiu-sen Wang

Preface

This special issue is published in honor of Professor Chiu-sen Wang, founding editor of *Aerosol and Air Quality Research*, on the occasion of his 70th birthday.

Professor Wang dedicated his long professional career to teaching, research and service in the field of aerosol science and technology. From late 1960s to early 2000s, Professor Wang taught courses in aerosol technology, first at Syracuse University and then at National Taiwan University. His research was focused on applications of aerosol technology in environmental health. The problems he studied include coagulation, particle deposition in the respiratory tract, air filtration, ambient aerosols, aerosols at workplaces, and indoor aerosols. Since his retirement from National Taiwan University in 2003, Professor Wang has continued to devote himself to aerosol research.

In addition to being a distinguished teacher and researcher, Professor Wang has contributed unselfishly to the promotion of the field of aerosol science and technology. With colleagues he founded the Chinese Association for Aerosol Research in Taiwan (CAART) in 1993 and the peer-review research journal *Aerosol and Air Quality Research* in 1999. He also established the Chiu-sen Award to recognize outstanding young aerosol scientists in Taiwan. During his tenure as president of International Aerosol Research Assembly (IARA) from 2002 to 2006, Professor Wang worked passionately to promote scientific understanding in the field of aerosol research.

In recognition of his contributions to the field of aerosol science and technology, Professor Wang was elected as an honorary president of CAART and an honorary member of Japan Association of Aerosol Science and Technology. He also received a Distinguished Achievement Award from CAART and the 50th Anniversary Award from Society of Powder Technology, Japan.

Included in this special issue are seven original research papers, one technical review article, and one book review. The contributors of these articles are mainly Professor Wang's close associates, former students, and the recipients of Chiu-sen Award. I wish to express my sincere gratitude to all the contributors and reviewers for their time and efforts in making the timely publication of this issue possible. It is my belief that this special issue represents a fitting tribute to Professor Wang and his life-long efforts. According to a Chinese saying, "Life begins at seventy." I sincerely congratulate Professor Wang on his 70th birthday, and look forward to his continued contributions to the field of aerosol science and technology.
